WEDNESDAY EVENING, SEPTEMBER 1.

FLECTRICITY IN THE BODY -Most peopl are familiar with the "(pa.k" which may b produced under certain conditions by straking the for of a cal; and travelers to Canada and other cold, dry countries have witnessed the still more remarkable phenomeron of the human body being turned into a conductor of electicity, and the pre ibility of lighting the gas by merely placing one's finger-given the necessary conditions of electrical excitementpear the gas jet, without any other accesy. Mr. A. W. Michison, the Africia traveler, who is engaged to writing a parrative of his exploring expeditions in Westero Central A rica, givesome still more startling facts.

He states that one evenius, when striking an African polive, in a moment of anger, with a cowhide whip, he was astonished to see searks produced, and still mere surprised to find the natives themselves were quire aconstomed to the phenomenon. He subsequently found that a very light touch, repeated several times, un-der certain conditions of hedily excitement, and in c rtain states of the atmosphere, would produce a succession of sparks from the bodies of native men as well as native catile. A lezy be gro, it seems, yielded none of these signs of electricity-s rather unfortunate circumstates for his more active tr three, who may possibly come in for a share of und served flagging from the hands of fu ura travelers in search of electried phenom- noe among the human race.
